I am an Aspiring IT/Cloud fresher with proper experience in AWS (EC2, ECS, ECR), Linux systems, containerization and CI/CD pipelines automation. I have build and deployed multiple pipelines with a solid infrastructure. I am quick to learn new systems and tools with a strong interest in cloud operations, infrastructure automation and technical support.

EXPERIENCE

Safran Electrical and Power India (SEPI) Nov 2025 – Mar 2026

Intern for Quality Department

Coordinated with the operators to maintain continuous improvement by bringing employee driven innovation
Maintained constant contact with the buying team to bring new machinery to setup the MRO department.

CERTIFICATIONS

MERN Full Stack Development (MongoDB, Express.js, React, Node.js) from Full Stack Academy	January 2024
AWS-DevOps (Cloud Computing, CI/CD, Docker, K8s) from Full Stack Academy	August 2024
Data Science (Artificial Intelligence, Machine Learning, Python) from Full Stack Academy	January 2025

SKILLS

Programming Languages: JavaScript, Python

DevOps Tools: Linux, AWS (EC2, ECS, ECR), Docker, Kubernetes, Jenkins, Ansible, Terraform, Maven, Tomcat, Nexus, SonarQube, GitHub Actions, GHCR, Nginx, Minikube

Version Control: Git, GitHub

Other: CI/CD, Infrastructure as Code (IaC), Bash/Shell Scripting, YAML

EDUCATION

Deccan College of Engineering and Technology Oct 2022 – August 2026

Bachelor of Engineering (B.E.) in Electronics and Communication Engineering (ECE)

Relevant Coursework: Computer Networks, Operating Systems, Database Management Systems, Cloud Computing

INDEPENDENT PROJECTS (Top 3)

CI/CD AWS ECR ECS pipeline November 2024

Applications used: Jenkins, Maven, SonarQube, Nexus and AWS ECS, AWS ECR

- A fully operational multi-application CI/CD pipeline.
- Used Jenkins for controlling the pipeline Maven, Nexus and SonarQube were used for Continuous Integration (CI), Docker and AWS ECS for Continuous Deployment (CD)
- Deployment is completely automated manual intervention has been eliminated.

Kubernetes Blue Green Deployment

August 2026

Applications used: Nginx, Docker, Kubernetes (Minikube)

- Enabled zero downtime deployments by running two identical environments and switching traffic only once the new version was verified
- Implemented Eliminated deployment risk with instant rollback – if something broke, traffic could be reverted immediately with no service interruption
- Improved release confidence by testing the new version live before it received real user traffic.

Kubernetes Multi Containerized App

December 2024

Applications used: Kubernetes, Docker, MongoDB, AWS EC2, Frontend and backend code

- Deployed a fully operational Full stack application with a working database.
- Kubernetes assisted in container orchestration, Docker for containerization and Nginx for efficient load balancing.
- Result: Scalable deployment using Kubernetes, improving system reliability for development.
